Interpretation and limits

Discovery uses weeks 1-4; check uses complete games in weeks 5-6. The policy was fixed before that original check. The next-game estimator now uses all snapshot rows. This is development evidence, with no fresh validation. Rule frequencies do not have independent rule-level predictive validation. Current coverage, safety shell, named rushers, personnel effects, split-formation effects, and concept success are unavailable. Five-plus actual rush is not a quarterback-pressure event. Rehearsal ideas are coaching hypotheses, with no measured concept advantage.
